Dear Mitch

I have something on my mind that I hope you will put on your list of things to consider. Bruce Davidson from Italkerton came to speak at Horticulture and really impressed us with his ideas for recycling styrofoam. He had slides of things like molding for beneath a ceiling and other uses that they make when they press the styrofoam. Our housing boom has to make us think more about our landfill sight.

I then some of us visited his building at the west end of Italkerton. After some trips he suggested we should be doing this in our own Huron-Kinloss. I'm sure he would be glad to do his talk for council or a group associated with environment.

You will know I have never made a request like this before but after Christmas with people getting gifts packed in styrofoam it made me think again about this project. This man came up with this idea after Italkerton water issue when he felt compelled to do something to help environment in his community.

Also thanks for letting us drop break off at Point Clarke. You earned a lot of points from Heritage Heights and other ~~communities~~ communities.
